

BP007 – Public Information – Individual Employee

This report listing provides public information fields for a single employee.

House Bill 961 designates additional reportable public information fields effective 10/01/2010. Portions of employee action history are now considered public. Action type, reason and effective date, along with the salary change amount as a result of the action are the additional public information fields, so they need to be included in a public information report.

BP007: Public Information - Individual Employee this report provides the complete public information history for one employee at a time. It includes all actions in the BEACON and the PMIS systems that have been designated as "Public Information". This report can be distributed upon request.

The BP007 report will be launched as a result of a jump (or GOTO) from the "B0150 BEACON Employee lookup" or from the "P0150 PMIS Employee lookup" reports. The variable values for the employee last name and the last 4 digits of social security number will be passed as hidden fields from the sending report.
